

Since I constrained from reproducing the image, I have typed out what I can see. I have attempted to keep the columns straight. Any errors are my own.

The 54 was crossed out in the log, which I faithfully reproduce herein. You can see he placed it in the wrong spot, crossed it out and then entered it in the appropriate spot. I believe that this is the appropriate method

In the first column, we see that when he adds 11 to 25 he gets 34, which is corrected to 36 in the top left hand corner
