PRAGINA  
 RANGA  
 HARBOUR  
 LEFT = 118 km  
 23 38 S.G.M.

All of working on the clear  
 being (light). The arrows in the airplane  
 clearly after the pilot were marked in  
 speed of the wind to be drawn in  
 The length of the arrow shows  
 speed of the wind for each hour and  
 scale. The dots in circles on the same  
 by Brad Reisinger. The arrow shows position  
 arrived at per observation of the sun  
 by reading. Topics: Chiricahua, Pikes  
 March 28<sup>th</sup>, 1931

The actual position  
 at a distance of 20 miles  
 from the sun  
 is on one of the  
 small lines made  
 from length of 20  
 miles.

There is an arrow made  
 in plotting the DR position  
 which shows the error  
 in the direction of the  
 wind error - the  
 DR position should  
 have been at the end of  
 the arrow.

It has been noted  
 on position lines  
 calculated at 0830 that  
 the two points were  
 between 4400 and 5000
